

I. Amendments to the Specification

Please replace paragraph [0005] with the following amended paragraph:

[0005] A loaded cargo is usually carried over a hauling cargo bed which is mounted on a truck chassis frame. In order to achieve this, it is required to lift up the cargo onto the hauling bed. Many designs have sought to ease this task. Lisota in U.S. Pat. No. 2,485,300 uses a tilting and moving bed to load or unload a truck. Many refinements of this method are used to lift up large cargo containers on truck chassis. ~~LaMoria~~ LaMora in U.S. Pat. No. 5,460,473 shows a system using a trailer to haul two containers in line. Alternately, Dixon in U.S. Pat. No. 6,099,232 shows a smaller cargo bed loaded into a pick up truck. Although these methods are widely used today, they are not practical for unpacked cargoes, nor can they be used to load or unload live animals.
